

# **API Release Notes**

Date: 2023.04.23

### Purpose of the document

This document describes new or changed API features.

#### 1. API Release Notes

#### Release April 23<sup>rd</sup>

Release Notes	Comment
Custom Fields API Changes to Custom Fields API POST /customfields/ requests	By addition that parameter, user can attach values to the custom field keys to the selected organization.  Additionally user can start to use the unique custom field ID to attach value to custom fields.  Developer Portal

After the next release, when calling POST /customfields/ requests API, by default, user can only attach values to the custom field keys from its default organization according to the token.

If user from the parent organization wish to attach a value for the custom field key which belongs to its child organization, organizationld parameter can be used.

By addition that parameter, user can attach values to the custom field keys to the selected organization.

Additionally user can start to use the unique custom field ID to attach value to custom fields.

```
"identifierType": "IMSI",
                                       Optional. by default the
"organizationId": "1.23.45",
                                        default organization ID
                                       of the user is used.
"identifiers": [
  "123456789012345",
  "123456789012346"
"customFields": [
                                      Optional. When fieldId is
    "fieldId": "12345678",
                                      specified, the fieldName will
                                      not be considered.
    "fieldName": "industry",
                                      User can use GET /custom-
    "fieldValue": "automotive"
                                      fields/ to get the list of
                                      Custom Fields with their
                                      unique IDs.
```
