

Deprecation Information and Important Changes

Date: 2024.02.14

1. Change of Base URL - SMS API

Transition period ends May 31.

SMS API

- **Existing base URL**
 - <https://exposureapi.dcp.ericsson.net>
- **New base URL**
 - <https://sms.iot-api.aeris.com>

In line with the IoT Platform transition from Ericsson to Aeris we wish to update you that a new SMS API Base URL with Aeris domain is now operational and available for use.

The URL transition period ends May 31.

During the transition period, both the existing and the new URLs will remain accessible to ensure a smooth migration process. It is crucial to emphasize that after the completion of the transition period on May 31, 2024, the old URL will no longer be accessible.

Please forward this communication to your respective teams at your company so an URL change can be performed during this transition period.

Thank you for your attention to this change.

2. SOAP API deprecation plan update

IoT SOAP API deprecation plan to REST API replacement is still paused. Once this API transformation from SOAP API to REST API starts, we will update you.

Portal, API Specifications & Support

For latest Portal, API specifications or if you need technical support, please contact your Technical Solution Manager (TSM) or [technical support](#).
